

The Best Access Control for a Safer World.

The Best Management System for Hotels.

Introducing the New Access-Plus®

Unique Features Enhance Security, Save Money and Streamline Operations

Imagine a security system that provides a higher level of safety for your guests and cuts expenses while giving you useful data for managing your employees. Now, stop imagining and let us show you that such a system already exists in our newly designed Access-Plus® On-Line Security.

We are proud to unveil this full-featured access control system to the lodging industry. Compare our features against all the other systems offered today and you will agree Access-Plus is beyond the industry standard in safety design, compatibility and management tools.

Access-Plus® On-Line Features:

GUEST SERVICE AND SAFETY

- Enhance guest service with Credit Card Keys
- Increase security with Sensor-Lock™ monitoring technology
- Alarms from rooms with forced entry and optional smoke annunciation
- Void lost or stolen keys instantly throughout the property from the central computer

MANAGEMENT AND COST SAVINGS

- Employee access limited to scheduled times and areas
- Employee time performance reports for evaluation
- Cost management in several ways:
 - Eliminates door-to-door programming of locks or retrieval of door history with hand-held devices
 - Reduces risk of liability from crime and fraud
 - Save energy with optional centralized climate control

OPTIONS AND COMPATIBILITY

- Compatible with many readers for different levels of security sensitivity; Magstripe, Smart Card, Proximity or Biometric
- Electrify locks through the jamb instead of coring doors
- Automatic climate control using motion and temperature sensors

On-Line vs. Off-Line Systems

Just How Different Are They?

In simple terms, off-line access control is just an electronic lock. There is no communication between the door and the front desk. It will not alert for alarm conditions or provide instantaneous data. If a master card-key is lost or stolen, it can take hours of door-to-door procedures to void that card.

Access-Plus® On-Line Security not only keeps real-time communication between rooms and the front office, it helps manage the property with employee time performance reports and increases the safety of your guests with Sensor-Lock™ monitoring technology. Use the chart below to compare and contrast some of the differences between on-line and off-line features.

Sensor-Lock, the standard hotel room lock offered by Access-Plus, monitors the status of door conditions. This illustration shows wiring the electricity through the jamb rather than through the door.

FEATURE	ACCESS-PLUS ON-LINE	OFF-LINE SYSTEMS
Credit Card Keys	Guest has choice of using own credit card as room key. Instant check-in; by-pass front desk.	Not possible. Key code is encoded per card.
Deadbolt Status	Sensor-Lock indicates whether deadbolt is thrown; information recorded at central computer.	Available, but information stored at lock and retrieved with hand-held device.
Real-time Door Monitoring	Alarm sent when door is ajar or forcibly opened. Valid entries and invalid tries recorded. Unlimited history recorded at central computer.	Alarm available, but does not alert front desk. Lock can only be interrogated after the fact with hand-held device. Limited history.
Individual Card Key Management	Each person has own key code. If lost, key can be voided instantly and another issued in seconds. It doesn't matter how many people are in a room.	If four people share a room and one key is lost, all four people must be found to have a new key issued.
Master Key Voiding/Validation	A command at the central computer deletes or adds master key card from all locks without physically going door-to-door.	A hand-held device or program card must be taken door-to-door to delete or add a master key.
Precise Smoke Detection (optional)	Indicates which room has activated smoke detector.	Not possible. You must go door-to-door to find smoke source.
Energy Management (optional)	Allows remote setting of climate controls for each room.	Not possible.
Control Employee Access	Instantly limit employees to work areas and scheduled times from the central computer.	Physically go door-to-door to revise employee access.
Employee Evaluation, Tracking and Locate Personnel	Track length of time to perform housekeeping duties and employee whereabouts throughout facility. Find the last door employee entered.	You would have to go door-to-door to trace one employee's activities. Not possible to locate immediately.
Prevent Crime	With individual keys, real-time monitoring, unlimited record of entries and tracking capabilities, theft is greatly reduced.	Imprecise key management, no door alerts, limited door history.

The Key To Success Is In The Cards

Credit Card Keys Open Doors of Convenience to Business Travellers

Here's how it works:

1. A guest calls for a room and requests Credit Card Check-In.
2. The reservation desk takes the credit card information, programs it to the room door and tells the guest the room number and check-in time.
3. The guest arrives, walks past the registration line straight to the room door, and with the swipe of his credit card ... voilà! He's checked in! The lock sends a message to the front desk notifying that the room is now occupied.

Now, shouldn't all guest services be this easy?

Easy to Install, Easy to Maintain

Designed for Compatibility, Integrates Variety of Readers, Offers Wiring Options and Updates Quickly

Whether you are building your lodge from the ground up or renovating an old classic, our system's components were designed for ease of installation. No special converters, no unusual wiring or voltage. Just determine the features you want and we will work with your specifications.

CHOOSE YOUR READER. We offer magstripe readers that read credit cards or pre-encoded card-keys. But if you wish to offer hands-free entry (to benefit the disabled for example), you might opt for a proximity reader. Or, if you require ultra-sensitive security for your vaults, you might want a biometric fingerprint reader. Most of these readers are easily integrated into our system, so feel free to choose multiple technologies to achieve the combination you require.

WHERE'S THE JUICE? Another of our unique features is the ability to install electrified locks without coring through your doors. This is particularly useful for classic establishments with antique doors or lodges with special fire-rated doors. If not through the door, then where does the electricity run? At the jamb! (See illustration above on the opposite page.)

GETTING UP TO DATE. With the Access-Plus hardware, firmware upgrades are easier than ever with updates accessible via the internet; you simply download directly to your central computer. Before now, a technician would manually replace each door's firmware with revisions or when new technology became available.

Saving Money

Make Better Use of Time and Resources

The bottom line comes down to value. Not only the value of your guests' safety, but the everyday cost of doing business. Here is a simple breakdown of how you can cut costs with Access-Plus:

- Eliminate time-consuming door-to-door operations
 - Adding keys by hand
 - Deleting keys by hand
 - Interrogating door by hand
- Increase productivity of employees by making them accountable for their time
- Reduce energy costs with remote climate controls
- Reduce theft of supplies by limiting access to areas
- Reduce risk of lawsuits from crimes by keeping your guests safer with smoke detection annunciation and Sensor-Lock™
- Eliminate fraud by utilizing records of door entries

How Much Does It Cost You To Change a Card-Key?

Off-line units require you to go door-to-door to add keys, delete lost or stolen keys, upgrade versions or to get the door history. Access-Plus does each of these tasks *in 1 minute*. If you estimate a door-to-door operation taking only 3 minutes per door, the cost to execute these procedures versus Access-Plus is dramatic.

Dollar amounts calculated using only minimum wage of \$5.75 per hour. See explanation below for details.

Estimated Time Comparisons

The chart above is just one example of how Access-Plus not only saves you money, but precious time. If a master key was stolen, how long would it take to delete it from every door in a lodging? Could you be sure to secure every door before a criminal could access it?

These figures are the same used to create the chart above:

Time to Delete Lost or Stolen Master Key

Number of Rooms in Lodging	Access-Plus® On-Line Security Keystrokes on computer	Off-Line Systems 3 min/door: average man hours to walk to each door and delete
100 Rooms	1 minute	300 minutes (5 hrs)
200 Rooms	1 minute	600 minutes (10 hours)
500 Rooms	1 minute	1,500 minutes (25 hours)

Think of the risks you will avoid with Access-Plus On-Line Security!
