SETTING THE  
CURVE FOR  
INNOVATIVE  
SECURITY.

## ABOUT OUR COMPANY:

Security Innovations, Incorporated (SII) is a US-owned and -operated manufacturer specializing in on-line access control systems and electrified mortise locks. In 1994, SII took the advanced technologies of commercial security from its sibling company, Proprietary Control Systems Corporation (PCSC) and customized them for the hospitality industry. With on-line access control as its flagship product, SII quickly gained recognition with five-star hotels in Asia, Canada and across the United States.

In 1996, the electrified mortise lock was offered to commercial locksmiths when SII realized its innovative jamb-wiring installation could benefit a whole new industry. The following year, wire-through-the-door locks were added to complement the line and give locksmiths greater flexibility.

Presently, SII is expanding its products even further with new technologies, and services. By integrating innovative security features with standard electrical and building specifications, SII provides safe, efficient and effective security solutions.

## HOTEL INDUSTRY: On-Line Access Control

The Access-Plus® On-Line Security system is a major technological advance for lodging properties. Access-Plus gives managers more features, more options and more control.

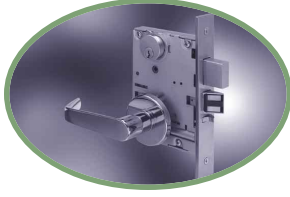

Features include the ability to integrate any combination of readers (magstripe, smart key, proximity or biometric), deadbolt monitoring, forced entry alarms and the instantaneous voiding of lost or stolen key cards. Guest services are increased with greater levels of safety as well as the convenient option of using credit cards as keys.

## Time and Cost Management

Access-Plus is cost-efficient in both its installation and its capabilities. The ease of installation saves money in labor and materials. Managing features log employee performance, regulate employee access and minimize costs related to security risks. Other money-saving capabilities include motion sensors to reduce costs in lighting, air conditioning and heating.

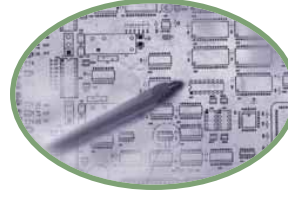

## LOCKSMITH INDUSTRY: Electrified Mortise Locks

SII offers commercial locksmiths the same durable electrified mortise locks it installs in lodging properties. Now, locksmiths can give their clients an option that saves labor, time and money.

With SII's wire-through-the-jamb design, electrified mortise locks can be installed in a fraction of the time of conventional door-wired locks. Electrifying the lock through the jamb saves the installer from coring doors and mounting special hinges. This option is especially useful when properties require fire-rated doors or when un-cored doors exist on a property.

New constructions might have pre-cored doors already ordered for the property. Or, when replacing old locks, the existing doors might be wired. When cored doors are already present, SII provides wire-through-the-door designs as well.

In any situation, SII's quality electrified mortise locks are an outstanding choice. The ability to utilize different wiring approaches gives locksmiths more command over a project and the flexibility to succeed in an industry of service.

## LOOKING AHEAD: Research and Development

The future holds exciting new products for the Access-Plus On-Line system which demonstrate SII's commitment to state-of-the-art security. With every new advancement, SII is proud to offer features that increase safety, decrease liability and improve guest services in the lodging industry.

**Closed Circuit TV Integration** — When a room alarm is triggered, floor cameras will automatically zoom in on the door of that room and provide a digital recording.

**Property Mapping** — The central computer will automatically pull up a map indicating where an alarm has been triggered.

**Automatic Paging** — When an alarm goes off, security will be given the room number immediately on a numeric pager.

The Research and Development department is testing and finalizing components for these features, and more. Clients can expect even greater improvements as SII continues to grow as an innovator in security, service and quality.

## MISSION STATEMENT:

Our goal is to provide the most reliable and efficient security products to the hospitality industry. We are dedicated to keeping our products and services superior in quality while researching new technologies to the maximum benefit of our clients.
